

### **Unemployment trend added**

A new dataset has been created in Facts & Stats in the Economic theme to show quarterly trends in the 'claimant count' for Enfield, London and England. To open a table view of this dataset click [here](#).

Please note that this includes estimated rates of unemployment which are out of the total working age population.

We will continue to update the usual datasets taken from GLA sourced data which provide their estimated rates which are out of the economically active population.

Both of the above use the 'claimant count' (of Jobseekers Allowance claimants). The Government's preferred measure which includes all those who want to work uses sample survey data. There is a much longer time lag in reporting this – for a report which includes this click [here](#).
